**Date:** **04-22-05**

## Suspension Spherical Bearing Upgrade

The spherical bearings found on FSCCA and SRSCCA shock absorbers are the low-cost units supplied from Bilstein. As such, they sometimes suffer from loose clearances from new. As an upgrade, Elan/Van Diemen are offering to supply another, higher quality Goldline bearing of like dimensions (part # - GEZ008ES), to be installed during production. As this will affect a change in the spec of the damper, it is being offered at a cost increase of \$105.00 per car set.
